

Creighton School Division No. 111

Policy Name: Communicable Diseases

Policy Type: Students

Number: 219

Date Approved: May 21, 2014

Legal Reference:

The Board of Education believes it has a responsibility, to the extent possible, to protect students and staff from risk of contagion by communicable diseases.

Guidelines:

1. In the course of providing protection from communicable diseases, the well-being and rights of all students and staff shall be duly considered.
2. Communicable diseases are defined as follows:
 - a) Category I diseases includes, among others, those that are common and can often cause large outbreaks. These include Pertussis, Measles, Hepatitis A, influenza, etc. (*See Appendix A*).
 - b) Category II diseases include Tuberculosis, Hepatitis (B, C and D), Sexually Transmitted Diseases (STD's), and Human Immunodeficiency Virus (HIV) (*See Appendix A*).

APPENDIX A

Category I Communicable Diseases

Aeromonas
amoebiasis
anthrax
botulism
brucellosis
campylobacteriosis
chickenpox
Chlamydia pneumoniae
Cholera
cryptosporidiosis
diphtheria
encephalitis
food poisoning of animal, bacterial, viral or chemical origin not including
salmonellosis or shigellosis
giardiasis
Haemophilus influenza b invasive disease
hantavirus
hepatitis A
influenza
invasive streptococcal disease
Kawasaki disease
legionellosis
leptospirosis
leprosy
listeriosis
Lyme disease
malaria
measles
meningitis of bacterial or viral origin
meningococcal infections
mumps
paratyphoid
parvovirus B 19
pertussis
plague
poliomyelitis
psittacosis
Q fever
rabies
relapsing fever
Rocky Mountain Spotted Fever
rubella

congenital rubella syndrome
salmonellosis, excluding typhoid and paratyphoid
shigellosis
tetanus
toxigenic staphylococcal disease
toxoplasmosis
trichinosis
tularemia
typhoid
unspecified viral hepatitis
verotoxigenic Escherichia coli infections
viral haemorrhagic fever
yellow fever
Yersinia enterocolitica

Category II Communicable Diseases

chancroid
Chlamydia trachomatis
gonococcal infections
granuloma inguinale
hepatitis B
hepatitis C
hepatitis D
herpes genitalis
human papilloma virus – infections of genital tract
human immunodeficiency virus infection, including acquired immune
deficiency syndrome
human T lymphotropic virus, Types 1 and II
lymphogranuloma venereum
syphilis
tuberculosis

Policy Name: Communicable Diseases

Number:

ADMINISTRATIVE PROCEDURES

1. Through the principal, school staffs are required to notify the local Medical Health Officer as soon as possible but within 48 hours if they become aware that someone has a communicable disease (*Public Health Act, 1994*).

In like manner, the Medical Health Officer has a responsibility to notify the school administrators of the existence of communicable diseases within schools.

2. In the event that a student or a staff member is infected with a Category I communicable disease which may present a significant health risk to others if transmitted, or where school officials have a reasonable basis to believe that a student's or a staff member's physical condition may pose a significant health risk to others, said student or staff member will be required to undergo a medical assessment by a physician at the Division's expense, if necessary, to determine the nature of the student's or staff member's physical condition and the extent of any health risk to others as a result thereof. Such medical exam shall be undertaken with all due haste. If there is any communicable disease present the physician will notify the Medical Health Officer according to the provisions of the Public Health Act and provide a medical certificate to the Board stating whether the physical condition or behaviour of the student or a staff member poses a significant threat to the health and welfare of the students or staff of the Division.
3. In the event that the physician examining a student or a staff member determines, in consultation with the Medical Health Officer, that the physical condition or behaviour of the student or staff member poses a significant threat to the health and welfare of the students or other staff of the Division;
 - a) the student will be required to withdraw from attendance at school and shall not be readmitted to school until the Medical Health Officer has determined that the student's condition no longer poses a risk of contagion in the school environment;
 - b) the staff member will be placed on a leave for medical reasons until the Medical Health Officer has determined that the staff member's condition no longer poses a risk of contagion in his/her working environment. Such medical leave will qualify the staff member for any sick leave compensation to which he/she may be entitled by virtue of his/her employment contract with the Board.

4. The Director or designate is hereby authorized to seek medical advice to determine if there is a reasonable basis to believe that a medical examination may be required of a student or a staff member and to direct that such an examination be performed.
5. Staff:
 - a) Upon receipt of a medical diagnosis that a staff member has a Category II communicable disease, the Director or designate shall inform the local Medical Health Officer of the situation. The Medical Health Officer shall be requested to consult with the staff member's attending physician.
 - b) Dissemination of information regarding the affected staff member shall be determined by the patient's physician. Such health information as is held by the Division will be treated in confidence and not shared without the written consent of the staff member.
 - c) A staff member infected with a Category II communicable disease shall not be prevented from working for the Saskatchewan Rives Division except on the recommendation of the Director or designate, following consultation with the Medical Health Officer and the staff member's attending physician.
 - d) When an infected staff member is excluded from his/her usual place of employment, every attempt shall be made to provide alternate employment. Decisions regarding appropriate settings shall be made on a case by case basis.
6. Students:
 - a) Upon receipt of a medical diagnosis that a student who is enrolled or seeking enrolment in the School Division has a communicable disease, the Director or designate shall consult with the Local Medical Health Officer. The Medical Health Officer shall be requested to consult with the student's parent(s) or guardian(s) and the attending physician.
 - b) Dissemination of information regarding the infected pupil shall be determined *in consultation with the local Medical Officer or the Medical Health Office nurse responsible for Communicable Diseases*. Such health information as is held by the Division will be treated in confidence and not shared without the written consent of the parent or guardian.
 - c) A student infected with a Category II communicable disease shall not be excluded from the regular educational program except on the recommendation of the Director or designate following consultation with the Medical Health Officer and the student's attending physician.
 - d) When an infected student is excluded from school, every attempt shall be made to provide an alternate educational program. Decisions regarding appropriate educational settings shall be made on a case by case basis.

Precautions:

1. The principal or designate shall review with teachers appropriate ways of educating all students about the proper ways of dealing with potentially infectious agents, and specifically in standard (universal) precautions against exposure to blood and body fluids.
2. In each school a definite plan shall be articulated by the principal or designate so that all students and all other staff in the building on a regular basis, will know the expected means of dealing with potentially infectious body fluids such as blood, vomit, or other secretions.
3. As a matter of course, open lesions on an individual who requires attention shall be covered using established first-aid procedures.
4. Any caregiver shall avoid unprotected exposure to blood or body fluids by taking adequate precautions (e.g. wearing rubber gloves, etc.).
5. A supply of disposable gloves will be distributed by the Education Centre to all schools and kept in a place designated by the principal so that they are available to be worn when needed by a caregiver.
6. Gloves must be worn if open lesions are present on the hands of any caregiver. These gloves must be immediately disposed of by discarding them into a plastic bag, along with any materials used in the clean-up of a spill of body fluids, if that material has not been satisfactorily disposed of by flushing into a school's sewage system. In any event, the soiled gloves and residue from the clean up will be sealed in a plastic bag and placed, by the staff (not a student) or a custodian, in an appropriate place for refuse collection.
7. Good hand-washing, using hot water and soap, shall be an established practice for all caregivers, staff and students.
8. Any soiled surfaces shall be cleaned with a disinfectant such as Javex, or its equivalent, diluted one part bleach to nine parts water.
9. Whenever possible, disposable towels or tissues shall be used in the clean up.
10. Mops shall be rinsed in a solution of disinfectant as indicated in No. 8 above (or Hydrox). Disinfected and rinsed mops shall be stored dry rather than being left in a solution.
